

THE SEWER PROS

Multi-Market Website Rebuild, SEO & Digital Growth Proposal

St. Louis, MO | San Diego, CA | Las Vegas, NV

INITIAL WEBSITE REBUILD & LAUNCH

\$6,000

ONGOING SEO & DIGITAL GROWTH

\$2,500 / month

Prepared for: Rick Coffman, The Sewer Pros

Prepared by: Sedrick Harris, Sirius Systems

Date: August 10, 2026

A scalable digital growth platform for three markets, built to increase search visibility, local authority, qualified leads, and long-term market share.

1. Executive Summary

The Sewer Pros has a strong service model and a differentiated position in sewer inspection, diagnostics, cleaning, locating, and preventative maintenance. The next opportunity is to bring that expertise together under one scalable digital platform that can support St. Louis, San Diego, and Las Vegas without fragmenting brand authority or duplicating strategy.

Sirius Systems proposes a two-part engagement. First, we will rebuild the website around a unified multi-market architecture and launch the highest-priority pages, conversion paths, technical SEO infrastructure, local search integrations, and measurement systems. Second, we will continue expanding and optimizing the platform through an ongoing SEO consulting and digital growth program.

Core engagement structure

Initial Website Rebuild & Launch: \$6,000 one-time. Ongoing SEO Consulting & Digital Growth: \$2,500 per month. The launch creates the foundation. The monthly engagement compounds its value through continued SEO, content expansion, local search, Google Business Profile work, measurement, and optimization.

INITIAL BUILD

- Unified three-market website
- 50-75 priority launch pages
- Technical SEO foundation
- Conversion and tracking setup
- Initial local-search integration

ONGOING GROWTH

- SEO strategy and consulting
- 3-4 substantial new SEO pages per month
- GBP and local SEO
- Optimization and internal linking
- Reporting and data-driven expansion

What success looks like

- One authoritative brand platform serving St. Louis, San Diego, and Las Vegas.
- More visibility for high-intent sewer inspection, cleaning, hydro jetting, drain, homebuyer, commercial, and location searches.
- A stronger Google Maps and local-search footprint in each eligible operating market.
- A repeatable content system that expands topical authority and supports AI and answer-engine discovery.
- Clear measurement of organic visibility, leads, local performance, and page-level opportunity.

2. Current Digital Presence

The current digital footprint contains valuable assets, but it is not yet structured to support a coordinated three-market growth strategy. The rebuild will preserve useful brand equity while creating a stronger foundation for expansion.

Area	Current State	Growth Implication
Website	Existing web presence is split between St. Louis and San Diego. Las Vegas requires a new market presence within the unified site.	Consolidate authority under one scalable architecture and build market-specific search systems.
Google Business Profile	St. Louis has an existing profile. No Google Business Profile is currently established for San Diego or Las Vegas.	Optimize St. Louis and establish additional profiles only where Google eligibility requirements are met.
Instagram	San Diego Instagram has 302 followers. Last post was approximately 90 weeks ago.	Existing audience can be reactivated through educational and proof-based content.
Facebook	San Diego Facebook page has 5 followers. Last post was April 19, 2024.	Rebuild activity and use social primarily as a trust and content-distribution channel.

Area	Current State	Growth Implication
SEO architecture	Current sites do not reflect the full multi-market service, location, audience, commercial, comparison, and resource opportunity.	Build a controlled expansion framework instead of publishing disconnected pages.

3. The Opportunity

The opportunity is larger than a visual website redesign. The goal is to build a digital acquisition system that makes The Sewer Pros easier to discover, easier to trust, and easier to contact across three distinct markets.

- Consolidate brand authority instead of operating disconnected market websites.
- Increase organic visibility for core service and service-plus-location searches.
- Own a stronger position around independent sewer inspection and second-opinion intent.
- Capture homebuyer, real estate agent, home inspector, property manager, commercial, and preventative-maintenance demand.
- Build local-search infrastructure around real operating locations and service areas.
- Establish Las Vegas digitally as a new growth market.
- Strengthen San Diego visibility beyond the existing website and dormant social profiles.
- Expand St. Louis authority around established operations and sewer lateral inspection opportunities.
- Build educational resources that support Google, Bing, featured answers, AI search, and sales conversations.

Strategic positioning

Independent sewer expertise without repair-driven upselling

The Sewer Pros can differentiate by emphasizing inspection, diagnostics, documentation, cleaning, locating, preventative maintenance, and second opinions without a repair-sales incentive. This positioning should be reflected consistently across service pages, location pages, Google Business Profiles, resources, and social content.

4. Project Goals

Goal	Business Outcome
Unified web platform	One brand and one scalable architecture across all operating markets.
Qualified organic growth	More visibility for searches that can produce inspections, cleaning calls, commercial inquiries, and referrals.
Local search growth	Stronger Google Maps visibility and market-specific entity signals.
Topical authority	Broader coverage of services, problems, audiences, comparisons, and educational topics.
Conversion improvement	Clear calls, inspection requests, forms, scheduling paths, and market-specific contact journeys.
Measurement	Track what pages, markets, services, and local assets are creating visibility and leads.
Scalability	Create a framework that can expand to more locations, services, and future markets without rebuilding the website again.

5. Recommended Digital Strategy

The program is organized around four connected systems. Each system supports the others, so the client is not paying for isolated tactics that operate independently.

System	Role in Growth
Website & Conversion Platform	The central authority asset for services, markets, audiences, commercial opportunities, education, and lead capture.
Organic SEO & Content	Build visibility through service, location, audience, commercial, comparison, alternative, problem, and resource content.
Local SEO & Google Business Profiles	Improve market-level visibility, reviews, map presence, service relevance, and website-to-GBP alignment.
Social Media & Content Distribution	Support trust, education, proof, content repurposing, and brand activity without allowing social work to consume the SEO budget.

6. Multi-Market Website Architecture

The recommended architecture uses one unified domain with dedicated market hubs. This keeps brand authority consolidated while still giving each operating market its own local search ecosystem.

Layer	Example Structure	Purpose
Market hubs	/st-louis-mo/ /san-diego-ca/ /las-vegas-nv/	Establish a primary organic and local landing point for each metro.
Location pages	/ {market} / {location} /	Target important cities, communities, neighborhoods, and districts.
Service + location	/ {market} / {location} / {service} /	Capture high-intent local service searches.
Commercial + location	/ {market} / {location} / commercial / {service} /	Build commercial demand where geography and service fit are strong.
Audience + location	/ {market} / {location} / for / {audience} /	Target homebuyers, agents, inspectors, property managers, and other relevant audiences.
Resources	/resources/...	Build topical authority and answer problem, education, comparison, and research intent.

Opportunity map, not a publishing commitment

Research completed to date has normalized 579 geographic opportunities and 18 service categories, producing 10,422 possible service-location relationships for prioritization. These relationships define the addressable SEO footprint. They are not a commitment to publish 10,422 pages. Pages will be selected based on market relevance, service availability, search opportunity, commercial fit, and performance data.

7. Market Strategy

St. Louis, Missouri

- Strengthen the established St. Louis presence and existing Google Business Profile.
- Prioritize Chesterfield, West County, St. Louis City, St. Charles County, Jefferson County, and other validated service areas.

- Develop homebuyer, real estate, second-opinion, cleaning, inspection, and sewer lateral content where operationally appropriate.
- Use established market history and reviews to reinforce trust and local authority.

San Diego, California

- Build a strong San Diego market hub with an emphasis on San Marcos and North County where appropriate.
- Prioritize high-value communities and cities such as San Diego, San Marcos, Carlsbad, Encinitas, Escondido, Vista, Oceanside, and other validated areas.
- Leverage homebuyer and real estate inspection demand as a major content and referral opportunity.
- Evaluate Google Business Profile eligibility and establish a profile when operational requirements are satisfied.

Las Vegas, Nevada

- Treat Las Vegas as a structured digital market-entry strategy.
- Prioritize Las Vegas, Henderson, North Las Vegas, Summerlin, Enterprise, Paradise, Spring Valley, Green Valley, and other validated areas.
- Develop residential, homebuyer, commercial, restaurant, property-management, and preventative-maintenance opportunities based on service availability.
- Establish local search and Google Business Profile infrastructure only after operating details and eligibility are confirmed.

8. Competitive Landscape & SEO Opportunity Analysis

A market-specific competitor analysis will be completed before the final presentation. The analysis will separate direct sewer specialists, full-service plumbing competitors, organic search competitors, and Google Map Pack competitors. The goal is to identify where competitors are strong, where The Sewer Pros is currently underrepresented, and where the largest practical SEO opportunities exist.

St. Louis SEO Gap & Opportunity Framework

SEO Area	Competitor Strength	The Sewer Pros Gap	Opportunity	Priority
Core service pages	Pending research	Pending research	Pending research	TBD
Service + location coverage	Pending research	Pending research	Pending research	TBD
Homebuyer / real estate content	Pending research	Pending research	Pending research	TBD
Sewer lateral content	Pending research	Pending research	Pending research	TBD
Commercial SEO	Pending research	Pending research	Pending research	TBD
GBP / Map Pack	Pending research	Pending research	Pending research	TBD
Reviews and local authority	Pending research	Pending research	Pending research	TBD
Resource / AEO coverage	Pending research	Pending research	Pending research	TBD

San Diego SEO Gap & Opportunity Framework

SEO Area	Competitor Strength	The Sewer Pros Gap	Opportunity	Priority
Core service pages	Pending research	Pending research	Pending research	TBD
North County / city coverage	Pending research	Pending research	Pending research	TBD
Homebuyer / real estate content	Pending research	Pending research	Pending research	TBD

SEO Area	Competitor Strength	The Sewer Pros Gap	Opportunity	Priority
Commercial SEO	Pending research	Pending research	Pending research	TBD
GBP / Map Pack	Pending research	Pending research	Pending research	TBD
Reviews and local authority	Pending research	Pending research	Pending research	TBD
Resource / AEO coverage	Pending research	Pending research	Pending research	TBD

Las Vegas SEO Gap & Opportunity Framework

SEO Area	Competitor Strength	Starting Position	Opportunity	Priority
Core service SEO	Pending research	New-market position	Pending research	TBD
Las Vegas Valley location SEO	Pending research	New-market position	Pending research	TBD
Commercial / hospitality SEO	Pending research	New-market position	Pending research	TBD
Homebuyer / real estate content	Pending research	New-market position	Pending research	TBD
GBP / Map Pack	Pending research	No current profile	Pending research	TBD
Reviews and local authority	Pending research	New-market position	Pending research	TBD
Resource / AEO coverage	Pending research	New-market position	Pending research	TBD

Competitive analysis deliverable

The final analysis will include named competitors, search visibility patterns, local-search observations, architecture gaps, content gaps, and a market-by-market opportunity summary. This section will be completed after live competitor research and is intentionally not populated with assumptions.

9. Service Strategy

Core services

- Sewer Camera Inspection
- Sewer Cleaning
- Hydro Jetting
- Sewer Cleaning + Camera Inspection
- Sewer Line Locating
- Drain Cleaning

High-intent and differentiated services

- Pre-Purchase Sewer Inspection
- Recurring Sewer Backup Diagnosis
- Preventative Sewer Maintenance
- Independent Sewer Inspection / Second Opinion

St. Louis-specific opportunity

- Sewer Lateral Inspection & Municipal Reporting, where service and reporting requirements are confirmed.

Service guardrail

The website should not imply that The Sewer Pros performs sewer repair, sewer replacement, trenchless repair, pipe

bursting, pipe lining, or general plumbing unless the company specifically confirms those services. The independent-inspection position is stronger when service claims remain precise.

10. Commercial Growth Strategy

Commercial SEO should be treated as its own acquisition channel rather than an afterthought on residential pages. High-value commercial content can be prioritized by market, service fit, and vertical opportunity.

- Commercial Sewer Camera Inspection
- Commercial Sewer Cleaning
- Commercial Hydro Jetting
- Commercial Drain Cleaning
- Commercial Sewer Line Locating
- Commercial Preventative Sewer & Drain Maintenance
- Commercial Grease & Sludge Removal

Priority commercial audiences

- Restaurants and food-service operators
- Property managers
- Multifamily properties
- HOAs
- Hotels and hospitality
- Retail properties
- Facility managers
- Commercial property owners

11. Audience Strategy

Audience pages allow The Sewer Pros to speak directly to the concerns, search language, and decision criteria of each customer group. These pages can later be expanded into audience-plus-location pages when the opportunity justifies it.

Residential / Real Estate	Commercial / Property
Homeowners	Property Managers
Home Buyers	Landlords
Home Sellers	Real Estate Investors
Real Estate Agents	HOAs
Home Inspectors	Commercial Property Owners
Contractors / Remodelers	Facility Managers
	Restaurants and Food-Service Operators

12. Phase 1: Website Rebuild & Launch

The \$6,000 initial project will focus on building the highest-value launch foundation, not on publishing every page identified in the long-term SEO architecture. The recommended launch scope is approximately 50 to 75 priority pages, with final count based on page complexity, approved content, and validated service coverage.

Launch Page System	Planning Range
Core company and conversion pages	8-10
Core and high-intent service pages	10-12
Commercial pages	4-6
Market hubs	3
Priority location pages	12-16
Priority service + location pages	10-16
Audience, comparison, alternative, resource, and FAQ pages	5-10
Target launch range	Approximately 50-75 pages

Launch principle

The launch website will be a complete operating website. Additional pages represent strategic growth opportunities, not missing components. This keeps the initial investment efficient while preserving a much larger roadmap for continued SEO expansion.

13. Website Launch Deliverables

STRATEGY & CONTENT

- Information architecture
- Priority page planning
- Core content development
- Service and market taxonomy
- Conversion pathways
- Initial local-search alignment

BUILD & TECHNICAL

- Responsive website development
- Technical SEO setup
- Metadata and canonicals
- Internal linking and breadcrumbs
- Structured data where appropriate
- Sitemaps, analytics, Search Console, Bing Webmaster Tools
- Migration, redirects, QA, launch

The site will be designed to scale. Page templates, content relationships, navigation, internal links, and technical systems will be built so that new SEO pages can be added efficiently during the ongoing engagement.

14. Phase 2: Post-Launch SEO Expansion

After launch, Sirius Systems will continue expanding the website based on the highest-priority remaining opportunities. The goal is to grow the site deliberately rather than publish large numbers of pages without evidence of demand or strategic fit.

- Additional location pages

- Service + location pages
- Homebuyer and real estate pages
- Commercial service and commercial location pages
- Audience + location pages where useful
- Comparison and alternative pages
- Problem, pipe-type, inspection, maintenance, and educational resources
- Optimization of pages already earning impressions but not yet converting or ranking strongly

15. Phase 3: Geographic & Topical Expansion

As the site gains data and authority, expansion can move deeper into secondary cities, neighborhoods, communities, commercial districts, specific audience segments, sewer problems, pipe materials, home-buying education, and maintenance topics.

Long-term content systems

- Sewer problems and symptoms
- Drain problems
- Pipe types and materials
- Sewer inspection education
- Home-buying and real estate resources
- Preventative maintenance
- Commercial education
- Comparisons and alternatives
- FAQs and glossary content
- Ongoing blog and timely educational content

16. Phase 4: Data-Driven SEO Growth

Over time, the roadmap should become increasingly driven by real performance data. The expansion system will use visibility, lead, conversion, market, and competitive signals to decide what to build next.

SEO growth cycle

Research > Prioritize > Create > Publish > Measure > Optimize > Expand

- Google Search Console impressions, clicks, queries, and page performance
- Rankings and competitor movement
- Organic calls, forms, inspection requests, and commercial inquiries
- Google Business Profile activity and review growth
- Service and market profitability
- Content gaps and emerging search demand
- New service or geographic expansion opportunities

17. Google Business Profile & Local SEO Strategy

Local SEO is a major workstream because the company currently has one Google Business Profile in St. Louis and no established profiles in San Diego or Las Vegas. Profile creation and verification will always be based on Google eligibility requirements and real operating details.

St. Louis

- Audit and optimize the existing profile.
- Review categories, services, business description, service areas, website links, appointment links, photos, and profile completeness.
- Align profile services and geography with the website architecture.
- Build an ongoing review acquisition and response process.
- Use market-specific tracking where practical.

San Diego

- Confirm operating location and Google Business Profile eligibility.
- Create and support verification when eligible.
- Build the local entity around accurate business information.
- Connect the profile to the San Diego market hub and validated service areas.
- Establish an initial review and activity plan.

Las Vegas

- Confirm market operations and profile eligibility before creation.
- Create and support verification when eligible.
- Connect the profile to the Las Vegas market hub and validated service areas.
- Develop the initial review base, photos, services, and local entity signals as the market grows.

Local SEO guardrail

The website can target legitimate service areas without creating fake business locations. Google Business Profiles will only be created for locations that satisfy current eligibility requirements. Market pages and location pages do not require a separate Google Business Profile for every city or neighborhood.

18. Social Media Revitalization & Content Distribution

Social media should support trust and content distribution rather than operate as a disconnected posting obligation. The current San Diego social presence can be refreshed and aligned with the broader three-market brand.

Channel	Current State	Recommended Direction
Instagram	302 followers. Last post approximately 90 weeks ago.	Refresh branding and profile information. Relaunch with education, inspection footage, proof, reviews, market content, and repurposed resources.
Facebook	5 followers. Last post April 19, 2024.	Refresh the page, connect it to the new site, and use it as a supporting trust and content-distribution channel.

Recommended content pillars

- Sewer education and common problems
- Camera inspection clips and findings
- Before-and-after cleaning examples
- Homebuyer and real estate tips
- Hydro jetting and preventative maintenance
- Commercial sewer and drain education
- Customer reviews and trust proof
- Team and company content
- Market-specific posts and service-area announcements

Scope boundary

Basic repurposing of SEO content for social channels can be included in the ongoing SEO program. Full social media management, daily engagement, custom video production, and higher-frequency posting should be scoped separately so the SEO budget remains focused on search growth.

19. Content Repurposing System

The strongest efficiency comes from building one authoritative source asset and distributing it across multiple channels. This allows SEO work to support local search, social media, sales conversations, and education at the same time.

Source Asset	Repurposed Outputs
SEO resource: "5 Signs You Need a Sewer Camera Inspection"	Website article, Google Business Profile post, Facebook post, Instagram carousel, short-form video topic, FAQ, email topic, sales education asset.
Local service page	GBP service content, social post, local FAQ, internal-link target, review request context.
Inspection case example	Short educational post, visual proof content, FAQ, sales talking point, market-specific social content.

20. Ongoing SEO Consulting & Digital Growth

The ongoing engagement is designed as a managed SEO growth program, not simply a monthly report. Sirius Systems will continue researching, prioritizing, building, optimizing, and measuring the digital footprint after launch.

MONTHLY STRATEGY

- SEO consulting and roadmap management
- Search Console analysis
- Competitive research
- Technical SEO monitoring
- Local SEO and GBP management
- Conversion review
- Monthly performance reporting

MONTHLY EXECUTION

- Approximately 3-4 substantial new SEO pages per month
- Existing-page optimization
- Internal linking improvements
- Content brief and topic development
- AEO and AI-search optimization
- Basic social content repurposing

Monthly page volume may vary by page complexity and by the amount of optimization, technical, GBP, or local-search work required in a given month. Quality, relevance, and business impact will take priority over publishing volume.

21. SEO, AEO & AI Search Strategy

The content and technical strategy will be designed for traditional organic search and for the growing number of answer and AI-driven discovery experiences. The objective is not to chase a single platform, but to structure authoritative, useful, locally relevant content that can be understood and surfaced across multiple search environments.

- Google organic search and local search
- Google Business Profile and Google Maps
- Bing search and Bing Webmaster Tools
- Featured snippets and People Also Ask opportunities
- Answer-engine optimization
- AI-driven search and citation opportunities
- Entity consistency, structured content, and clear subject relationships

22. Conversion Strategy

Traffic only matters if it produces the right conversations. The website will make service requests clear and reduce friction between search discovery and contacting The Sewer Pros.

- Prominent phone and service-request paths
- Request Inspection and Schedule Service calls to action
- Market-specific contact routing where needed
- Commercial inquiry paths
- Real estate and homebuyer inspection pathways
- Short, useful forms
- Reviews and trust proof
- Independent-inspection positioning and documentation examples
- Clear next steps on service and location pages

23. Measurement & Reporting

Reporting will focus on visibility and business outcomes. The goal is to identify what is working, where opportunity is emerging, and what should be prioritized next.

Measurement Area	Examples
Search visibility	Impressions, clicks, ranking queries, ranking pages, keyword and topic expansion.
Local search	Google Business Profile visibility, calls, website clicks, review growth, market activity.
Lead generation	Calls, forms, inspection requests, commercial inquiries, conversion paths.
Website performance	Organic traffic, conversion rate, top landing pages, service and market performance.
Content growth	Newly ranking pages, page improvements, internal-link opportunities, content gaps.

24. Project Timeline & Rollout

The estimated initial rebuild timeline is approximately 6 to 8 weeks, contingent on access, approvals, service validation, and timely feedback. Some workstreams will overlap to keep the project moving efficiently.

Phase	Estimated Timing	Primary Work
1. Discovery & Access	Week 1	Confirm goals, services, operating markets, access, brand assets, current accounts, conversion paths.
2. Architecture & Priority Planning	Weeks 1-2	Finalize launch page list, market hierarchy, service taxonomy, internal-link plan, migration priorities.
3. Design & Development	Weeks 2-5	Build responsive website system, templates, navigation, conversion components, technical foundation.
4. Content & SEO Implementation	Weeks 3-6	Develop and optimize launch pages, metadata, internal links, structured content, local alignment.
5. QA, Migration & Launch	Weeks 6-8	Redirects, analytics, Search Console, Bing, testing, mobile QA, launch.
6. Ongoing SEO Growth	After launch	Monthly expansion, optimization, GBP/local SEO, competitive research, reporting, and strategy.

25. Investment

Initial Website Rebuild & Launch

INITIAL WEBSITE REBUILD & LAUNCH

Unified three-market website foundation, approximately 50-75 priority launch pages, technical SEO, conversion architecture, migration, analytics, and initial local-search integration.

\$6,000

ONE-TIME

Suggested payment schedule

Milestone	Amount
Project kickoff	\$3,000
Architecture / development milestone	\$1,500
Prior to launch	\$1,500

Ongoing SEO Consulting & Digital Growth

ONGOING SEO CONSULTING & DIGITAL GROWTH

SEO strategy, approximately 3-4 substantial new SEO pages per month, optimization, technical monitoring, internal linking, competitive research, local SEO, GBP work, reporting, AEO/AI search, and basic social content repurposing.

\$2,500

PER MONTH

Scope note

Paid media budget, advertising spend, full social media management, custom video production, premium third-party software, and other third-party fees are not included unless specifically added to the final agreement.

26. Initial Launch vs. Ongoing Growth

Initial Website Rebuild & Launch	Ongoing SEO & Digital Growth
Unified website architecture	SEO consulting and roadmap management
Approximately 50-75 priority pages	Approximately 3-4 substantial new SEO pages per month
Responsive design and development	Existing-page optimization
Technical SEO setup	Technical SEO monitoring
Migration and redirects	Internal linking and content expansion
Analytics, Search Console, Bing setup	Search Console and performance analysis
Initial local SEO alignment	GBP management and local SEO
Launch QA and deployment	Competitive research and data-driven growth
	Basic social content repurposing and reporting

27. Client Responsibilities & Assumptions

- Confirm service availability and limitations by market.
- Confirm Las Vegas operating details before market-specific claims or Google Business Profile work.
- Provide accurate business-location information required for local search and profile eligibility.
- Provide access to domains, websites, analytics, Google accounts, Search Console, Google Business Profiles, and social accounts as needed.
- Provide current logos, brand assets, photos, reviews, service information, and operational details where available.
- Review and approve strategic content and major website decisions in a timely manner.
- Notify Sirius Systems of service, location, ownership, phone, scheduling, or operational changes that affect website accuracy.

28. Ownership, Accounts & Project Terms

The final service agreement will govern legal and commercial terms. The working principles for this proposal are that The Sewer Pros should retain control of its domain, Google Business Profiles, social accounts, analytics properties, and other core business accounts. Approved website content and final deliverables will transfer according to the payment and ownership terms in the final agreement.

- Third-party platform fees and advertising spend are separate unless explicitly included.
- Google Business Profile creation and verification are subject to Google eligibility and verification processes.
- Search rankings, map placement, AI citations, traffic, and revenue outcomes cannot be guaranteed because search platforms and competitors are outside either party's control.
- The program will prioritize sustainable practices, accurate business information, useful content, and measurable improvement rather than guaranteed ranking claims.

29. Why This Approach

The Sewer Pros is not simply receiving a redesigned website. This engagement creates a unified digital growth platform that can support three markets today and additional growth in the future.

The foundation

Unified brand platform + three-market organic search system + local search infrastructure + commercial acquisition system + content engine + social distribution support + long-term SEO growth architecture.

The initial rebuild establishes the infrastructure. The ongoing engagement increases the value of that infrastructure by continuously identifying, publishing, optimizing, and measuring the next best opportunities.

30. Next Steps & Acceptance

1. Review the proposal and confirm the strategic scope.
2. Complete the market-level competitor analysis and incorporate final findings.
3. Confirm service availability and operating details for each market.
4. Finalize the service agreement and payment terms.
5. Submit the initial project payment.
6. Begin discovery, access collection, architecture, and launch planning.
7. Build, QA, and launch the new website.
8. Begin the ongoing SEO consulting and digital growth program.

Proposal Acceptance

This proposal summarizes the recommended scope and investment. Final commercial and legal terms will be governed by the executed service agreement.

Investment summary

Initial Website Rebuild & Launch: \$6,000 one-time. Ongoing SEO Consulting & Digital Growth: \$2,500 per month.
